

# How to Create a Lightweight Frame for Heritage House Banners

To create a lightweight and collapsible frame use Schedule 80 PVC. Build the frame 2-3" bigger than the finished size of the banner. Then attach the banner using zip-ties through the grommets to pull it tight. The purple arrows indicate the locations where we recommend gluing the pieces together to give some rigidity but still allow it to be pulled apart and easily rolled with the banner. If there is not an arrow pointing at a joint do not glue if you want it to roll together when disassembled. It is always best to roll the banner rather than fold.

Use 3/4" or 1" Schedule 80 PVC Pipe. You will need 4 elbows, and 2 tees and enough pipe to go around the banner and have a center brace.
